

Construction Technology Update

By Nancy Matus, Marketing Manager, Kelar Pacific

Do you use Bluebeam Revu or Autodesk AutoCAD? Both software packages introduced new releases in March.

Revu is a popular PDF application in the construction industry for adding mark-ups, photos and other support detail to PDF construction documents. Revu 2017 makes measuring spaces fun with the new Dynamic Fill tool. With Quantity Link you can now link from multiple PDFs to Excel worksheets for automatic bid calculations – and use your own formulas and formats. Both the Measurement and Count Tools have added values and settings to provide more meaningful data in the Markups List.

AutoCAD is favored for design and detailing projects. AutoCAD 2018 delivers helpful updates such as maintaining live paths to external files, and selection sets when navigating off screen. High resolution support and a mobile app enable you to see greater detail wherever you may go.

Watch for upcoming webinars from Kelar Pacific on all the new features in your detailing and PDF tools. Kelar Pacific also provides services including 3D laser Scan-to-Model for accurate as-builts, detailing, and Robotic Total Station Layout. We can perform your BIM requirements when needed.
